

Bella the Beta

- Feed Bella about ten pellets three times a week. (prior to feeding take out the plant)
- When you add water, make sure that it has been sitting out in an open container for 24 hours.
- Add water only to the "curve" of the jar. (the skinniest place on the jar)
- After you add the water (any amount), put six drops of water conditioner into the jar.
- Clean out the jar every two to three weeks. Make sure Bella is in a cup of water that has been sitting out for 24 hours. Also, make sure that the rocks in the bottom do not fall out.
