

## Taking Care of the Gecko

### Feeding:

One cricket on Monday and Wednesday, two crickets on Friday.

Put the crickets in a bag with the powdered calcium, shake it until the crickets are covered and then put them in the cage.

Check to make sure he has water daily. (It will evaporate)

### Environment:

Always keep the light on and centered in the cage. Keep the heating pad on high. The temperature should be between 82 and 90 degrees F.

### Holding:

You can hold him. Be careful, he is very squirmy and may try to jump from your hands.

\*\*If you can't find him in the cage he might be under the water dish.
